

*Family Life Education*

The District will establish a comprehensive and sequential K-12 Family Life Education unit of study within the health curriculum. This unit of study will explore the biological, emotional, ethical, social and intellectual variables that comprise the total person. Furthermore, the unit itself will emphasize responsible decision-making, positive self-concept, mutual and self-respect and a knowledge and understanding of the sexual dimension of one's life.

Parents in all cases shall have the option to decide if their child shall participate or not. If the student does not participate in this unit of study, alternate health assignments will be provided.
