There are hundreds of grooves from around the world and even more yet to be invented! Here are some of the most common ones every drummer should know.

8th note rock patterns

Here are the 5 eighth note rock grooves that we included on the poster. Listen to your favorite pop/rock records to learn even more!

1. Try your right hand on the ride cymbal, move it to the hi-hat, or even the floor-tom!

2. You don't have to play fast to groove! Work with a metronome at different speeds to develop a great groove!

3. Using an open/closed hi-hat can change the feel of a groove dramatically. Experiment with using the tip or shoulder of the stick for different sounds!

4. Playing rock grooves generally requires a medium to heavy stick with a short taper to produce the volume necessary to cut through a rock band. We suggest using a stick made of hickory because it has a fibrous grain and is denser and more rigid than maple. Good models to look for are Vic Firth’s American Classic® 5A, 5B or ROCK drumsticks!

16th note rock patterns

These work well with faster rock tunes that need a busy hi-hat. Play the hi-hat with both hands.

For different sounds, experiment with the amount of pressure that you place on the hi-hat pedal.

Work to line your hands and your feet up EXACTLY together! Nothing spoils a groove faster than sloppy playing!

Half-time rock patterns

These are useful for creating rhythmic variety. Listen for a “half-time” feel in some of your favorite songs.

Use a straight right-hand sticking on the hi-hat in this groove.

The cymbal bell makes a nice change in sound - emphasizing the heavy counts one and three for this half-time groove.

FUNK

These grooves often move the snare to a more interesting place than just 2 and 4. Listen to any James Brown recordings for some of the funkiest drumming ever played!

Little known VIC FACTS

Did you know that before Vic Firth became the timpanist in the Boston Symphony Orchestra, he played drumset and even was a leader of a popular big band?

**R&B**

R&B/Hip-Hop Grooves

These grooves are all over the radio! Listen to whether they are played straight or with a slight swing feel and how this can change the groove and therefore the song. Play these with only one hand on the hi-hat for a completely different texture than the 16th note rock grooves.

Mastering the elusive “swing eighth note” is essential for playing jazz. To get started, simply phrase all your eighth notes like triplets. For example, the ride cymbal pattern is written: but is played:

These first 5 grooves are good examples of a steady swing beat with various snare drum comping. Don’t forget your dynamics: the ride cymbal is strong, the hi-hat is tight and snappy, the bass drum is very soft (called “feathering”) and your snare drum “comping” rhythms are clear, but not as loud as your cymbal pattern. Listen to great jazz drummers to hear their interpretation of swing. As always, listening is your best teacher!

Many grooves from all over the globe are traditionally played by multiple musicians on percussion instruments, not on a drumset. We are borrowing those percussion parts and creating grooves for the drumset for one player. Be sure to listen to the real music from each country to understand the original intent of these “world” grooves.
